

Castine LLC Announces Sub-Second Aggregated Trade Reporting Tool For 100 million-plus Trades for Multi-OMS, Multi-Clearing, Multi-Asset Class Trading Desks

Breaks sub-second mark for trader-managed reporting; scales to over 1B trades

June 19, 2025

Castine's *Aggregated Trade Reporting (ATR)* tool has shattered the one-second barrier for complex, high-volume reporting, delivering sub-second performance across large data sets from multiple sources and asset classes. It empowers users with real-time insights, eliminates delays, and transforms trade reporting from a bottleneck into a competitive edge.

"It is a game changer to be able to report and search across all of one's OMSs and asset classes in one place.

Compared to the alternative of piecing together incompatible reports, *ATR* is much more productive, accurate, and responsive," said Robin Hodgkins

Brokers, hedge funds, and asset managers rely on *Aggregated Trade Reporting (ATR)* to generate both tactical and strategic insights across all their trading footprint, without depending on developers or wrestling with pivot tables. *ATR* puts a curated, self-service reporting solution directly into the hands of traders, desk heads, COOs, and key team members, delivering instant answers when every second counts.

As Castine President Robin Hodgkins puts it, "Castine's *Aggregated Trade Reporting (ATR)* is a game changer for traders and operations teams across the industry... the solution our clients know they can rely on when time is of the essence."

ATR solves the perennial challenge faced by traders, sales, and operations teams: needing timely insights but spending hours, or even days, chasing them down through siloed or redundant reports. Castine's *ATR* delivers sub-second reporting across all trade types, asset classes, accounts, OMS platforms, and data sources. With an intuitive, curated dashboard, users can instantly generate precise reports on their own, empowering them to act quickly and decisively, before opportunities slip away.

ATR is completely cloud-based and is available on all major cloud providers, including AWS, Google Cloud Platform, Microsoft Azure, and Rackspace, as well as a client's own cloud. "We wanted to make this as flexible as possible; we think we nailed it," said Tom Smith, Castine's Executive Vice President of Sales.
